(54) Title: PIMPLE REMOVAL UTENSIL

(57) Abstract: A pimple removal utensil is provided in which pimples are easily squeezed open sanitarly with the pimples left untouched irrespective of size of the pimples. The pimple removal utensil includes a holder having an uneven surface which is formed to be easily held by the hand, and an auxiliary grip protruded perpendicularly with the uneven surface, and a pressing portion in which a first extension and a second extension are formed so that both extensions correspond to each other by opening one portion on the circumference of an insertion hole, and gradually narrowing the opened edges, and the bottom surface thereof is formed of a convex curved surface. A massage ball is further provided on the upper portion of the holder. The first and second extensions are made of a number of indents, which are gradually narrowed in correspondence to each other.
